

O programa de Pós-Graduação em Genética convida para a palestra:

ANIMAL SEX DETERMINATION BY GENES, CHROMOSOMES AND THE ENVIRONMENT

Prof. Jennifer Marshall Graves

La Trobe University, Melbourne
Australian National University, Canberra

Jenny Graves is an evolutionary geneticist who works on Australian animals and uses genome comparisons to explore the origin, function and fate of human sex genes and chromosomes, (in)famously predicting the disappearance of the human Y chromosome and the extinction – or speciation – of humans. Besides her scientific publications she also writes science articles and columns – on sex, evolution, and women in science – for the public. She is a Fellow of the Australian Academy of Science, 2006 L’Oreal-UNESCO Laureate for Women in Science, and she won the 2017 Prime Minister’s Prize for Science (the 1st woman to win solo).
